History of Geo- and Space Sciences

History of Geo- and Space Sciences indexed in the Science Citation Index Expanded

Thomson Reuters has announced that they will include the open access science-history journal History of Geo- and Space Sciences (HGSS) in their Web of Science/ISI listings following the completion of their assessment of the quality, characteristics, and flow of papers published in the journal since its launch in 2010. This is terrific news and represents the tremendous work of the editorial board and, more importantly, the trust of the scientific community to submit articles of top quality to HGSS. Thomson Reuters will include all issues of HGSS in their databases, and we are looking forward to announcing its first impact factor in June 2014.

Once again, we would like to thank all those authors, referees, the editorial team, and the tremendous support of Copernicus Publications, which have all made the journal such a success.

Please note that it may take several weeks or even months until Thomson Reuters has processed all XML metadata following the data transfer from Copernicus Publications.

Kristian Schlegel
HGSS Executive Editor
